

Strategy & Methodology

Who to sell signal-based prospect lists to — and why they buy

The product, in one line

A signal-detection system that identifies **contractors, integrators, EPCs, and facility owners showing public buying signals** — project awards, expansion announcements, permit activity, subcontractor growth, hyperscale data-center development, infrastructure expansion, and hiring pressure — **before the hiring need becomes obvious**.

Who the ideal buyer is

The best buyer is a **contingency or direct-hire recruiting firm that places people INTO those contractors and constantly needs new job orders**. They get paid per placement, so “which company is hiring right now” is their oxygen. A weekly signal list gets them to the contractor while the need is forming — ahead of the recruiters who wait for a stale job posting.

The core insight: This is a *client-acquisition* tool, not a candidate-sourcing tool. It fills the top of a recruiter’s funnel with companies to call for job orders.

What was deliberately down-ranked

Excluded / de-prioritized	Reason
Insight Global, Tradesmen International, PeopleReady, Labor Finders, TRS, Orion Talent, Outsource	Giants / generic labor — not hungry, wrong buyer
waterTALENT, Water Workforce (ranked low, with caveat)	Operator-deployment model — they are the employer deploying W2 staff into utilities, so they buy “which districts are short-staffed,” not “contractors to call”
Broad healthcare / finance / office / hospitality staffing	Outside the skilled-trades & infrastructure thesis

What was up-ranked

Small-to-mid **niche** firms where a founder, VP, or branch/BD lead is plausibly reachable and every new client account converts directly to revenue — across the five priority niches: Utah data-center / skilled infrastructure, California fire protection / life-safety, California water/wastewater, power/grid/substation, and industrial maintenance / automation.

Scoring model

Each agency was scored **1–5** on three axes:

- **Fit** — how squarely their desks match the signal engine's output.
- **Urgency** — how active the hiring pressure is in their market right now.
- **Likelihood to pay (LTP)** — budget + how acutely a lean shop feels the client-flow gap.

Data-integrity rules applied: Public sources only. No invented contact information. Where an owner or email is not public, it is marked “**not found.**” No verified personal emails were publicly available for these decision-makers — the cleanest first channel for every target is **LinkedIn + the company's website contact form**. Named owners are shown only where public: Linn Atiyeh (Bemana), Brian Binke (The Birmingham Group), Shay Chawla (Aqua Staffing), Haj Carr (Trueline Talent).
