

Top 5 First-Contact Targets

The five strongest combinations of niche fit, hunger, and reachable decision-maker

These five land dead-center in the priority niches, are small/mid and hungry, and each has a reachable owner or a tight BD footprint. Work them in this order.

1 **SOLID Personnel** — *Your single best first call*

SF Bay Area, CA · Fit 5 / LTP 4

Why they're a good fit. Niche-only shop (since 2013) covering low-voltage, telecom, energy/construction, fire-safety, structured cabling, and security — this is the signal engine's exact output. They win on job orders, so "more contractors to call" is their oxygen.

Exact list to offer. **OFFER** "California + Western U.S. non-union / open-shop low-voltage, structured-cabling, fiber, and fire-safety contractors that showed a buying signal in the last 30 days (project award, expansion, permit spike, hyperscale subcontract)."

Pain point to lead with. "You're reacting to job orders that come in — I get you to the contractor while they're still deciding to hire."

3 proof samples to build first:

- A CA data-center integrator that just won a hyperscale cabling subcontract
- A fire-alarm / LV contractor with a permit spike + open reqs
- A structured-cabling firm posting a sudden cluster of tech roles after an award

Contact first. The Founder / owner (name not public — pull from the LinkedIn company page "People" tab). BD/branch lead is the fallback.

2 Data Center TALNT — *Highest urgency, your #1 niche*

Salt Lake City, UT · Fit 5 / LTP 4

Why they're a good fit. A recruiter that does nothing but Salt Lake City / Wasatch-Front data centers during Utah's build boom (Novva, Aligned, C7, and others). Urgency is maxed.

Exact list to offer. **OFFER** "Wasatch-Front + Mountain-West data-center operators and their GCs / electrical / LV subs showing expansion, new-campus, or permit signals this week."

Pain point to lead with. "You already know the operators — but the electrical and LV subs staffing their builds turn over fast, and you find out after the reqs are stale."

3 proof samples to build first:

- A new Utah data-center campus permit + the awarded electrical contractor
- An LV / fiber sub hiring for a named SLC project
- A substation / power-infra firm tied to a data-center load expansion

Contact first. The owner / lead recruiter (name not public — LinkedIn "People" tab).

3 Bemana — *Founder-reachable, power + data-center*

Metairie, LA · Fit 5 / LTP 4

Why they're a good fit. Founder-led firm with dedicated Power Generation and Data Center desks — a decision-maker you can name and reach.

Exact list to offer. **OFFER** "Electrical, power-generation, and mission-critical / data-center employers entering hiring cycles (award, plant upgrade, capital project, hiring-pressure spike) — nationwide."

Pain point to lead with. "Your desks are only as full as your live job orders — this keeps the top of that funnel full without more cold prospecting."

3 proof samples to build first:

- A power-gen contractor announcing a plant / upgrade project
- A data-center electrical EPC with a hiring spike
- An electrical-equipment / service firm expanding a branch

Contact first. Linn Atiyeh, Founder & CEO (publicly named). Reach via LinkedIn + the site contact form; direct email not found — do not guess.

4 Automationtechies — *Tiny, owner-run, feels it immediately*

Eden Prairie, MN · Fit 5 / LTP 4

Why they're a good fit. A 2–10-person, automation-only firm. A small team feels “3 accounts you're not calling” instantly, and the owner is the buyer.

Exact list to offer. OFFER “U.S. manufacturers, warehouse-automation integrators, and semiconductor / cleanroom facilities showing automation hiring pressure (new line, robotics deployment, controls req cluster).”

Pain point to lead with. “As a lean shop, every hour you spend hunting for who's hiring is an hour you're not placing — I hand you the ‘who’ every Monday.”

3 proof samples to build first:

- A manufacturer announcing a new automated line / plant
- A warehouse-automation integrator with a PLC / controls req cluster
- A semiconductor / cleanroom facility expansion with maintenance / controls hiring

Contact first. The Owner / President (only initials are public — confirm the full name via LinkedIn before outreach; do not invent it).

5 EPR Recruiting — *Your niche #2, in California*

Camarillo, CA · Fit 5 / LTP 4

Why they're a good fit. Camarillo, CA firm covering fire & life-safety, fire sprinkler, suppression, low-voltage, and electrical — your California fire/life-safety niche, verbatim. Mid-sized (~59 people, ~\$23M), so budget exists.

Exact list to offer. OFFER “California fire-protection, fire-alarm, sprinkler, and life-safety contractors expanding service or install teams (new contract, backlog growth, multi-role hiring spike).”

Pain point to lead with. “NICET-certified fitters and alarm techs are brutal to place — the edge is calling the contractor the moment their backlog jumps, before every other recruiter does.”

3 proof samples to build first:

- A CA fire-sprinkler contractor that just won a large commercial job
- A fire-alarm / life-safety firm with a NICET-tech hiring spike
- A security / LV life-safety integrator expanding into a new metro

Contact first. A branch / BD manager (a recruiter, Rob Amendola, is publicly listed as a starting node; confirm the actual hiring-decision owner via LinkedIn). Direct email not found.
