

Outreach Messages

Positioned as a signal-detection system — not “AI leads”

All three use the same call to action:
could call?”

“Would it be useful if I showed you 3 sample accounts your team

MESSAGE 1 — DIRECT LINKEDIN MESSAGE

Hi [First name] — I built a signal-detection system that flags [low-voltage / data-center / fire-protection / power / automation] contractors likely to need skilled labor *before* the need becomes obvious — from project awards, expansions, permits, and hiring pressure. It’s tuned to the exact space [Agency] recruits into. Would it be useful if I showed you 3 sample accounts your team could call?

MESSAGE 2 — SHORT COLD EMAIL

Subject: 3 contractors likely staffing up in [niche] this week

Hi [First name],

I run a signal-detection system that spots [electrical / low-voltage / fire-protection / data-center / automation] companies likely to need skilled labor before they post a single job — using public signals like project awards, expansion announcements, permit activity, and hiring pressure.

I built it because recruiters in your space usually find out about a hiring contractor *after* the req is already stale and half the market is calling. This gets you there first.

I pulled a few that fit [Agency]’s desks. **Would it be useful if I showed you 3 sample accounts your team could call?**

[Your name]

MESSAGE 3 — FOLLOW-UP

Hi [First name] — circling back. I set aside 3 [niche] accounts that each threw a hiring signal in the last couple of weeks — the kind of company your recruiters would normally reach a step too late. No pitch, just the accounts and why they’re worth a call. **Would it be useful if I showed you 3 sample accounts your team could call?**

Positioning reminder: Never say “AI leads.” Lead with “I built a signal-detection system that finds companies likely to need skilled labor before the need becomes obvious.” The entire goal of the first message is a single yes: seeing 3 sample accounts.
